Department Rulemaking on RPS-Existing Class II

Dear Ms. Karp

I write to ask that the Department's proposed final rulemaking on the renewable portfolio for existing renewable power companies provide increased credit values for existing wood power generating companies like Pinetree Fitchburg's business in Westminster.

I own Anderson Logging and Lumber based in Westminster, Mass., and through that business I employ about seven people. Pinetree Fitchburg is a major buyer of wood chips from my company. Good forestry jobs depend on good stable long term customers for wood, like the Pinetree Power Company.

My business purchases over \$350,000 annually from local companies that supply goods and services that are needed for the operation of my company. These companies depend upon my business and I in turn depend on Pinetree Power.

I ask that you consider an increase in the level of credits from the existing rule because it will help with long term wood market stability, which is important for the jobs provided by my company and others.

Sincerely,

Scott Anderson
Owner
